	40

Order

Catalog No.	L
STLPH	20

## Features

- Decreases the damage caused when setting a blank material.
- The number of support plates is adjustable up to 6 plates to equalize the weight of a blank material and support plates.

## For Operation

- Approximately 10 mm of clearance is required on the upper die to avoid contacting the gauge body and support plates.
- The load of approximately 500 g per a plate is required to swing the support plates.
